

Wildlife research and consulting services informed by direct experience with the habitats and landscapes of the West.

CORE CAPABILITIES

- Threatened and endangered species surveys and monitoring
- Avian surveys: point counts, nest searches, demarcation, and curtailment monitoring
- Pre- and post-construction biological monitoring
- Botanical and invasive species surveys
- Insect surveys and applied ecological research
- Wetland delineation and habitat assessment
- Field data collection, mapping, reporting, and research support
- Biological support for water-related projects

FEDERAL RECOVERY PERMITS

Fish and Wildlife Service recovery permits held for southwestern willow flycatcher, yellow-billed cuckoo, Mexican spotted owl, Chiricahua leopard frog, and narrow-headed gartersnake.

SELECTED EXPERIENCE

GILA RIVER, NEW MEXICO

Riparian bird surveys

Yellow-billed cuckoo and southwestern willow flycatcher field surveys supporting land-management decisions.

GILA WILDERNESS

Rare plant research

Multi-year searches, population estimates, and field documentation for uncommon mountain thistles.

SOUTHWESTERN U.S.

Sensitive-species permitting

Recovery-permit experience supporting surveys and monitoring for birds, amphibians, and reptiles.
